Rated lifting capacities

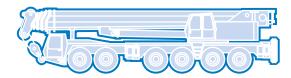

NOTES FOR LIFTING CAPACITIES

WARNING: THIS CHART IS ONLY A GUIDE.
The notes below are for illustration only and should not be relied upon to operate the crane.
The individual crane's load chart, operating instructions and other instruction plates must be read and understood prior to operating the crane.

- 1.All rated loads have been tested to and meet minimum requirements of SAEJ1063OCT80 Cantilevered Boom Crane Structures Method of Test, and do not exceed 85% of the tipping load on outriggers fully and 50% extended, and 75% on outriggers 0% extended (fully retracted) as determined by SAEJ765OCT80 Crane Stability Test Code.
- 2. Rated loads include the weight of hookblock, slings and auxiliary lifting devices and their weights shall be subtracted from the listed rating to obtain the net load to be lifted. When more than the minimum required hoist reeving is used, the additional rope weight shall be considered part of the load to be handled.
- 3. Capacities appearing above the bold line are based on structural strength and tipping should not be relied upon as a capacity limitation.
- 4. The machine shall be leveled on a firm supporting surface. Depending on the nature of the surface, it may be necessary to have structural supports under the outrigger floats or tires to spread the load to a larger bearing surface.
- 5. When either boom length or radius or both are between values listed, the smallest load shown at either the next larger radius or next longer or shorter boom length shall be used.
- 6. Tires shall be inflated to the recommended pressure before lifting on rubber.
- 7. For outrigger operation, outriggers shall be properly extended with tires raised free of crane weight before operating the boom or lifting loads.
