HYDRAULIC CRAWLER CRANE LUFFING BOOM SUPPLEMENTAL DATA

- Rated loads included in the charts are the maximum allowable freely suspended loads at a given boom length, boom angle and load radius, and have been determined for the machine standing level on firm supporting surface under ideal operating conditions. The user must limit or de-rate rated loads to allow for adverse conditions (such as soft or uneven ground, out-of-level conditions, wind, side loads, pendulum action, jerking or sudden stopping of loads, inexperience of personnel, multiple machine lifts, and traveling with a load).
- Rated loads do not exceed 75% of minimum tipping loads. Rated loads based on factors other than machine stability such as structural competence are shown by asterisk * in the charts.
- The machine must be reeved and set-up as stated in the operation manual and all the instruction manuals. If these manuals are missing, obtain replacements.
 - Boom backstops are required for all boom lengths.
 - The crane must be leveled to within 1% on a firm supporting surface.
- Do not attempt to lift where no radius on load is listed as crane may tip or collapse.
- Attempting to lift more than rated loads may cause machine to tip or collapse.
Do not tip machine to determine rated loads.
- Weight of hooks, hook blocks, slings and other lifting devices are a part of the total load. Their total weight must be subtracted from the rated load to obtain the weight that can be lifted.
- The minimum rated load show below.

Minimum Rated Load	
Luffing Boom	Long Boom
5,200 lbs	6,800 lbs

- When lifting over boom point with auxiliary sheave, rated loads for the boom must be deducted as shown below.

Deduction Auxiliary Frame	
Luffing Boom	Long Boom
440 lbs	1,550 lbs

- In case of auxiliary sheave for luffing boom, the total lifting load is the value for 440lbs deducted from rated loads for the luffing boom without auxiliary sheave, but it should not exceed 29,700lbs.

- In case of auxiliary sheave for luffing boom, the total lifting load is the value for 1,550lbs deducted from rated loads for the long boom without auxiliary sheave, but it should not exceed 29,700lbs.

- Auxiliary sheave ratings at any radius from center of rotation are the same as boom ratings shown in table for main boom when operated at the same radius.
But maximum angle is the same as main boom maximum angle.

- Boom lengths for auxiliary sheave can be equipped.

HYDRAULIC CRAWLER CRANE CONFIGURATION

14. Hook block and number of reeving parts of line restriction

- (1) The self-weight of luffing jib point hook block must be heavier than or equal to the table below.
- (2) Total number of reeving parts of line on luffing jib point hook block must be larger than or equal to the table below.

Danger!

Follow the both (1) and (2) above at the same time for the luffing jib operation.

Otherwise luffing jib may tip over the backwards due to lack of weight on front side of boom.

Failure to observe this precaution may lead to the jib tipping backwards and resulted to machine collapsing.
